## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 21, 2006 has been entered. Applicant's REMARKS have been reviewed in light of the Amended claim language. The previous rejection is withdrawn as a result thereof.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-9, 15, 16, 21-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Letcher et al., US 5,581,672 in view of Evans et al., US 6,775,647.

Letcher discloses an iterative process for estimating the manufacturing cost of an object, e.g. a product, via a computer aided design system/method using a display device, e.g. 14. Letcher does not disclose the term cost calculator processor.

The computer of Lechter would inherently comprise a memory and processor. Nonetheless, computer systems having a memory and processors have been common knowledge in the computer art.

Evan discloses an apparatus comprising an input device, a cost calculator processor, e.g. 16, a display device, e.g. 10, physical characteristics, e.g. step 32.

To have provided a cost calculator processor for calculating a manufacturing cost for a product for Lechter would have been obvious to one of ordinary skill in the art in view of Evan.

Official Notice is taken that split screens for simultaneously displaying and analyzing data at various stages, e.g. Hoskins, US 6,98,412.

To have provided the data for Lechter, as modified by Evans, to have been provided on a split screen would have been obvious to one of ordinary skill in the art.

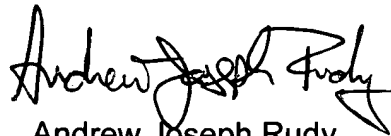

It is noted Applicant's claim language is replete with intended claim language, e.g. "for estimating," "adapted to." Such claim language is given patentable weight, but less patentable weight than positively recited claim language. As is, the Letcher, as modified by Evan, disclosure is deemed able to carry out Applicant's claim language. Applicant's REMARKS have been reviewed, but are moot in light of the new grounds of rejection.

4. Further pertinent references of interest are noted on the attached PTO-892 that teach various aspects of Applicant's claim language.
